(54) COMPARTIMENT DE REFRIGERATEUR AUGMENTATIF

(54) AUGMENTATIVE REFRIGERATOR COMPARTMENT

(57)

An augmentative refrigerator compartment (10) adapted for use with a portable chest refrigerator (20) to afford a first temperature zone in a chest portion (20) of the refrigerator and a second temperature zone in a space defined by the augmentative refrigerator compartment (10), the first temperature zone being less than the temperature of the second temperature zone. The augmentative refrigerator compartment (10) comprises an open-topped and open-bottomed box member (12) and a sealing means (14) depending continuously around a lower periphery of the box member. The box member (12) is arranged to be vertically mounted on the chest portion (20) and between the chest portion and a lid portion (30) of the portable chest refrigerator. The sealing means (14) affords a hermetic seal between the box member (12) and the chest portion (20).
